Abstract of the Disclosure

A sealing cover particularly suitable for bottles for beverages comprises a sealing element-(19) for sealing an outlet opening-(60) of a container. Further, the sealing cover comprises a safety element-(18) which is cap-shaped, for example, and adapted to be displaced or twisted relative to the sealing element (10) from a closed position into an opening position. Further, an indicating means-(34) for indicating the opening position is provided. ~~According to the invention, t~~The indicating means-(34) is arranged at an outside-(74) of the sealing element-(10) or the safety element-(18) so that the indicating means-(34) is tangible because of the change of position of the indicating means upon transferring it from the closed position into the opening position.
